

ASTM C 557 Shear Test Fixture

Compression Rating: 50kN (11,250 lbs.)

Construction: Steel

Scope of Delivery: Both pieces of the fixture including top guillotine

Adapter/Coupling: female 1 ¼" with a ½" locking pin

Notes: The fixture sits flat on the bottom table and therefore only requires a top adapter. This fixture is very similar to the one for ASTM D905, however the window has been modified to accommodate the 102 x 89 mm (WxH) sample size. The sample shelf is 0-32 mm allowing for the two glued together boards to sit on the shelf while the third, staggered board, hangs down before being sheared.

Schematic (mm)
